

SENIOR MANAGER, GIS AND MAPPING

ARE YOU A GOOD FIT?

YOU are a skilled professional, experienced in the utility scale renewable energy business, and driven to make a difference. You know what is needed to support the development of large-scale wind, solar and energy storage projects and how to deliver best-in-class representations of those projects. You're an expert with industry standard mapping software, such as ArcGIS, CAD, etc., and are accustomed to using them to create the maps and analyze the data needed for siting, transmission, engineering, and permitting. As our in-house leader of this critical work, you will contribute to our growth and direction with your advice and recommendations for best practice solutions. You will collaborate with colleagues in Project Development and report directly to our Director, Engineering.

Your career includes 5+ years of GIS experience and at least 2 years in the renewable energy industry. You are comfortable with land surveys, legal descriptions of land, and related title reports, knowing how to extract needed information to help target your efforts. In addition to working closely and productively with your coworkers, you are an effective manager of relationships with outside consultants and external resources. You are scrupulously honest and professional in your approach to your work. You thrive in an environment where you collaborate with colleagues who are also dynamic, committed, passionate professionals.

You're extremely well-organized, able to manage competing priorities, and respond quickly and nimbly to the changes inherent in a fast-paced environment. While often working on your own, you recognize the importance of providing regular, structured updates on your activities.

We would prefer that this position be based at our Chicago headquarters but will consider a remote location for attractive candidates. This role will require some travel to project development sites and, if remote, time at our Chicago headquarters.

ARE WE A GOOD FIT?

WE are PNE USA, Inc., a wholly owned subsidiary of PNE AG Group in Germany, one of the pioneers in developing onshore and offshore wind farms and, more recently, solar and energy storage projects. We're based in Chicago and our core team operates from our headquarters in the city's downtown area. While our activities are supported by our parent company (more than 400 employees and the financial resources of a significant publicly traded firm), we are a small team here (we like to describe ourselves as "lean and nice" – not "lean and mean!").

We take pride in our ethical and transparent approach to our business dealings and the excellent relationships we establish with customers, stakeholders, and partners. We set challenging goals and work together to craft the strategy and plans to achieve them.

We offer a competitive benefits package to full-time employees, including health, dental and life insurance, a 401k match and more.

IS THIS OPPORTUNITY A GOOD FIT? If so, we'd like to hear from you. Tell us about yourself!
